SUMMARY

An analytical and results-driven software engineer with experience in full stack development, automation and scalable system design. Proficient in frontend and backend technologies, database management and API integration with a strong focus on building efficient, maintainable and user-friendly applications.

EDUCATION

Vels University of Technology, Chennai
B.E. Computer Science

TECHNICAL SKILLS

Frontend:	HTML, CSS, JavaScript, ReactJS, Tan Stack Query
UI Libraries:	Material UI, ShadCN, GSAP
Backend:	Node JS, Express JS, REST APIs
Database:	SQL (MySQL, PostgreSQL), Mongo DB
Deployment:	Git & GitHub, Docker, CI/CD, Vercel & Netlify
Tools:	VS Code, Postman, Chrome Dev tools

EXPERIENCE

One Origin, Bengaluru, Karnataka
Associate Software Developer, 2022-2024

- Developed and maintained the SIA, document-processing platform using Google Cloud OCR to digitize U.S. school and college transcripts and extract structured data, improving data accessibility and reducing processing time
- Implemented robust data filtering and validation pipelines to ensure high accuracy and relevance of extracted transcript data
- Designed and optimized a user interface for viewing processed transcript data, enabling efficient search, review, and analysis of candidate academic records
- Built modular server-side services to handle client-specific transcript formats, enhancing processing efficiency and reducing development effort

Mountblue.io, Bengaluru, Karnataka
Software Engineer, 2024-present

Client – **Varthana Finance**, Project – **Sparsh (Loan Application Platform)**

- Designed and implemented end-to-end workflows for loan submission, validation and status tracking for both business and individual users.
- Built responsive and user-friendly UI and integrated with GTR APIs to ensure real time data synchronization.
- Optimized backend workflows for high concurrency and enabled custom client-specific input configuration via a low-code platform, catering to unique client requirements and workflows.
- Collaborated with cross-functional teams to improve scalability, reliability and maintainability making Sparsh 2.0 a significant upgrade over the previous version.

Client – **Indegene**, Project - **Banner (Pharmaceutical Advertisement creation platform)**

- Built a web-based creative banner editor enabling pharmaceutical teams to design and publish compliant digital ads with customizable templates, streamlining regulated marketing campaigns
- Implemented drag-and-drop UI components and template management systems to speed up ad creation, incorporating client-specific branding and content configuration.
- Developed automated compliance and approval workflows to enforce regulatory requirements for medical advertising, collaborating with UX designers to optimize usability and governance.
